Comprehensive Eye Examinations

Your eyes play a vital role in your life. How many everyday activities would be difficult, even impossible, without your vision? Routine eye evaluations are the best way to ensure that your vision is healthy and to prevent later disease.

Eye Surgical-Medical Associates offers comprehensive eye health examinations and full scope medical eye care at our state-of-the-art facility. We also have a full-scale optical shop with highly skilled opticians on staff to help with your every eye care need.

To maintain optimal eyesight, we recommend visiting us every one or two years for a full eye exam. With regular examinations, we can make needed corrections to your vision, detect irregular findings and begin the best treatment at an early stage.

We routinely screen for many eye diseases and conditions, such as glaucoma, cataracts and macular degeneration. Many eye conditions and diseases require regular monitoring to ensure that eye damage does not occur. If diagnosed and treated early, these conditions and diseases can be controlled and damage to vision prevented.

Visiting us regularly for an eye exam is the best thing you can do to ensure that your natural eyesight is at its best.

We can instruct you on many methods to maintain and protect your eyesight. For instance, ultraviolet light can damage your eyes, so it's important to protect your eyes when you go out in the sunlight with sunglasses that block UV rays. Playing sports and sometimes even working can cause eye injuries, so we can recommend the type of safety glasses or protective goggles that will be best to prevent injury to your eyes.

We can also help with nutritional information, health information, eye care tips, eyeglass fashions and more.

The doctors and staff at Eye Surgical-Medical Associates are committed to preserving your eyesight for a lifetime!
